ATTN: Students and Staff

Medical Care for Influenza Patients

The Student Health Care Center primarily offers health consultation and provisional treatment services for Tohoku University students and staff. However, given that we are unable to perform in-depth clinical exams and stock only a limited variety of medicines, we can provide only temporary emergency treatment for anything other than light illnesses. Consequently, you are advised to visit one of Sendai's clinics or hospitals for serious health issues. Influenza in particular is often accompanied by high fevers and serious complications, and we do not have influenza medication at the Center. Therefore, we recommend that you go to one of the city's medical facilities if you think you may have influenza.

The Student Health Care Center apologizes for any inconvenience this may cause, and asks for your understanding.

Student Health Care Center Director
